

\$500

per month

**That's what companies charge
to apply to jobs for you.**

Zero personalization.
Zero customization.
Just your money.

I looked at what they were doing...

...and built my own.

Better results. Fully personalized. Completely free.

The problem with job searching

Three things that waste job seekers' time and money every day:

01 Filling the same form 100 times

Same questions. Same fields. Every application. Your time deserves better.

02 Generic resumes get auto-rejected

ATS systems filter out 75% of applicants before any human sees the resume.

03 Paid services charge up to \$500/mo

To just click Apply for you. No tailored resume. No personalization.

So I built my own pipeline.

Weeks of work. Runs every morning. Costs pennies.

100%

ATS keyword coverage
on every single resume

65%

Minimum fit score Claude
requires before applying

8 AM

Daily automatic run —
no babysitting needed

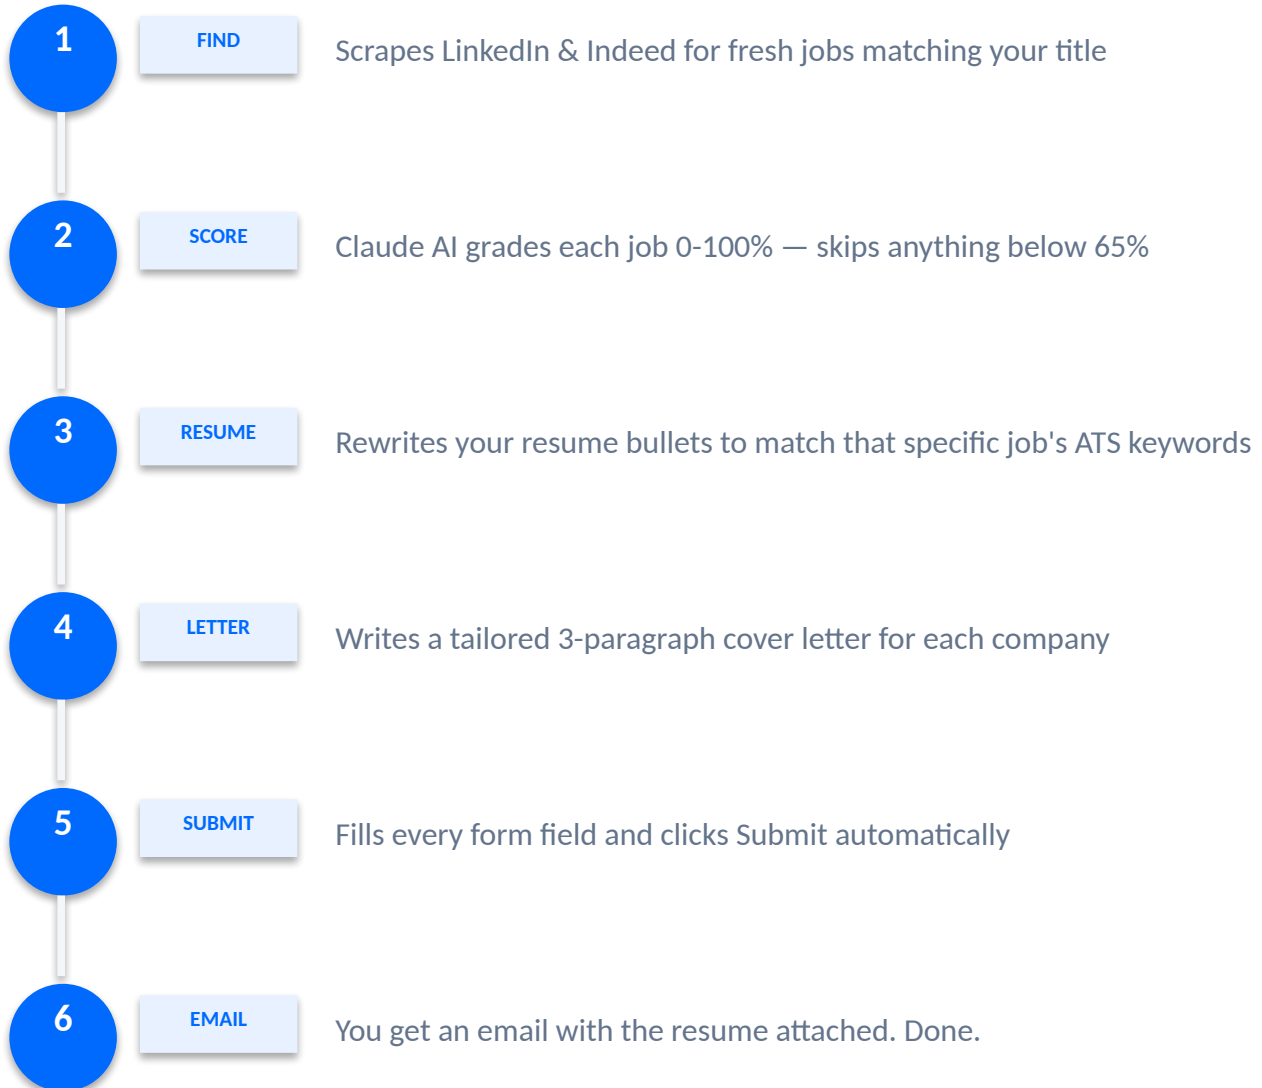

Works on both platforms simultaneously:

LinkedIn Easy Apply

Indeed In-Portal Only

One setup. Runs forever. You just check your email each morning.

6 steps. Zero manual work.

Built with real tools.

Not no-code. Not toys. Production-grade Python from scratch.

Python 3.11

Core engine

The honest reason I built this.

While job searching, I kept seeing platforms that would apply to jobs for me — for \$200, \$300, even \$500 a month.

I looked at what they were actually doing. It was not complicated. Click Apply. Fill a form. Repeat.

I thought: I am a Data Engineer. I know Python. I can build this myself — and make it actually good.

So I spent several weeks building a pipeline that does everything they do, plus:

- Tailors a unique resume for every single job using AI
 - Writes a custom cover letter per company
 - Only applies if Claude AI scores the fit at 65% or higher
 - Emails me every application with the resume attached
- Now it runs every morning at 8 AM while I drink my coffee.

I open-sourced it. If you're job searching, you can use it too.

It actually works.

Here is what one run looks like:

Found 32 job cards

IT Heroes — Data Engineer

Fit score: 82% B ✓

ATS: 72% → 100% (+28%) ✓

Resume saved + Cover letter saved

Submit attempt 1/5...

Application submitted and confirmed!

Email sent → you@gmail.com ✓

Applied: 2 jobs | Scored: 15 | Skipped: 13 (below gate)
